

## ACKNOWLEDGEMENTS

This observation was part of a bird migration study that was financially supported by a scholarship from the German academic exchange service (DAAD). We thank Andreas Buchheim and Lutz von der Heyde for their photos and useful comments.

## Corrigendum

### **Eldar A Rustamov. 2015. An annotated checklist of the birds of Turkmenistan. *Sandgrouse* 37: 28–56.**

The author inadvertently omitted the species entry for Barred Warbler, which reads:

**Barred Warbler** *Sylvia nisoria*. Uncommon passage migrant preferring valleys and oases in mountains and plains. Spring migration April, autumn August to September.

This should be inserted before **Orphean Warbler** *Sylvia hortensis* and after **Desert Warbler** *Sylvia nana* (p49).
